

Analytics and Reporting

Easy monitoring and reporting with CTDS Customs Process Governance

You can't improve what you can't see

It is almost impossible to keep track of the details in your customs data. Every cleared declaration adds lots of new information and more and more layers to an already large quantity of data. It can seem overwhelming: Where to start and where will you end up? What should you look for? And how?

CTDS Customs Process Governance helps you get to grips with every detail of your customs data thanks to our Analytics and Reporting modules. Armed with this insight into your customs performance, you will be able to identify gaps and make potential improvements.

CRUNCH THE NUMBERS WITH ANALYTICS

Analytics helps you sort large data quantities and use them to drive improvements. Using data from the imports and exports KGH clear for your company, the Analytics module promotes transparency – and gives you the tools to be proactive and close the gaps that keep you from attaining operational excellence.

Not only is your customs data made available to your entire staff group, it is also presented in a more attractive way, making it easy to work with. Charts and graphics help you visualize data and spot trends and mitigate risks along the way.

Analytics lets you work and share results with colleagues within the system – and anyone outside as well. Bookmarking, printing and exporting data helps you share your knowledge and put it to use in your company.

STAY IN THE KNOW WITH REPORTING

If you want to skip manual filtering and analysis tasks, Reporting is a perfect option. With this module, you automatically receive the most important data and numbers directly in your inbox, once a month. Every report is delivered in Excel so you can easily process, reuse and share it within your organization.

Different price plans define the reports available. With our Professional plan, you get our standard report package with four different types of reports. For customers wanting to take their analysis and monitoring one step further, the Advanced plan lets you add tailor-made reports. We can tailor reports and their contents according to customer needs, taking care of every detail during the set-up phase.

Strategic customs decision support

With a full overview and enhanced data quality, you can take conscious, well-informed decisions at all levels for your company and business.

Customs compliance by control and risk mitigation

Is your company compliant enough? With the ability to follow up and analyse possibilities, the archive function, the risk assessments and mitigations, you will be able to answer the question yourself.

Monitoring trade performance and continuous improvements

Monitor in-depth transparency, and introduce extensive scorecards and service level agreements. Measure KPIs, discover enhancements and develop your business continuously.

Customs operational efficiency and duty optimization

In our experience, a well-performed customs operation reduces administrative costs by up to 30%, and a functional duty optimization can save you up to 8% of the value of the goods.
